Green Performance Benefits

EnviroCel[™] High Performance Polyurethane Backing

EcoClassic, EcoRib, and EcoMax are all backed with EnviroCel polyurethane backing systems for commercial carpet that contain recycled, recovered, and renewable materials and are 60% to 70% green by backing weight. EnviroCel replaces large percentages of petroleum-based components in its polyurethane chemistry with biobased polyols made from soybean plants. EnviroCel also contains Celceram®, a recovered pre-consumer recycled mineral compound that adds to the product's environmental and performance benefits.

- EnviroCel is third-party certified for recycled and renewable materials and contributes to LEED totals.
- EnviroCel qualifies for Federal purchasing preference under the USDA's BioPreferredSM program. (GSA SIN31-601)

Envirorer

EnviroCel[™] Polyurethane Precoat BioGrip[™] 100% Post-consumer recycled fleece layer BioGrip[™] with non-skid natural rubber compound layer

Cradle to Cradle Guarantee

When a replacement order is made at the end of a customer's defined period of use, we gladly take back the discarded **EcoPath**[™] matting and recycle it into other high-guality product components such as AstroTurf[®] infill and recyclable carpet and mat backing. This regenerative process is EcoPath's cradle to cradle guarantee and our promise to the environment.

BioGrip™ SAFETY SURFACE

Maximized non-skid performance with natural rubber. The protective fleece layer is 100% post-consumer recycled plastic bottles (PET therephthalate polyester).

MOISTURE RESISTANT BACKING

- Maintains non-skid traction
- Floors stay dryer, no staining

All our products are made in the U.S.
